Fire Danger Raised to **MODERATE** in Missoula County— Outdoor Burning to Close July 3rd

Missoula, MT, July 3 – Due to increasing temperatures, reduced precipitation, and drying vegetation, wildland fire officials with the Missoula County Fire Protection Association (MCFPA) have raised the fire danger within Missoula County to **MODERATE**, effective immediately. When fire danger is moderate, fires readily start in open, dry grassland and will burn and spread quickly on windy days. Most timber fires will spread slowly to moderately. Residents and visitors are asked to use caution, especially as they enjoy the outdoors this upcoming Independence Day. On average, three out of every four wildfires in Missoula County are human caused. The top causes being debris and open burning, escaped or abandoned campfires, equipment or vehicle use, and fireworks. Fireworks are prohibited on all federal and state public lands, private classified as forest lands, Missoula City and on City Open Space lands, and Missoula County Parks and County-managed Recreation Areas. Visit www.ci.missoula.mt.us/1763/Fireworks for information on novelty fireworks that are allowed within Missoula City limits. Know before you go by visiting www.MCFPA.org for further local information and www.MTFireInfo.org for information on fire restrictions in place throughout the state, as well as information on current active fires and wildfire preparedness.

All outdoor burning in Missoula County, which includes the General, Essential Agriculture, and Prescribed Wildland Outdoor Burning seasons, will close effective July 3rd.

“Now that it’s the first part of July, we need to start focusing our attention on resource availability and fire season readiness. Despite a rainy spring, there has been plenty of favorable conditions for homeowners to complete their debris burning. It is time to restrict the risk of human cause starts especially as conditions are trending hotter and drier,” explains Beau Maciag, Area Assistant Fire Management Officer with the Montana Department of Natural Resources and Conservation’s Southwestern Land Office

Closing open burning when fire danger goes up and conditions are dry helps to reduce the chance of those unwanted wildfires. One less spark is one less wildfire!
